Experiment 3 – Head and Tail Commands

Aim: To display the beginning and ending lines of a file.

Commands

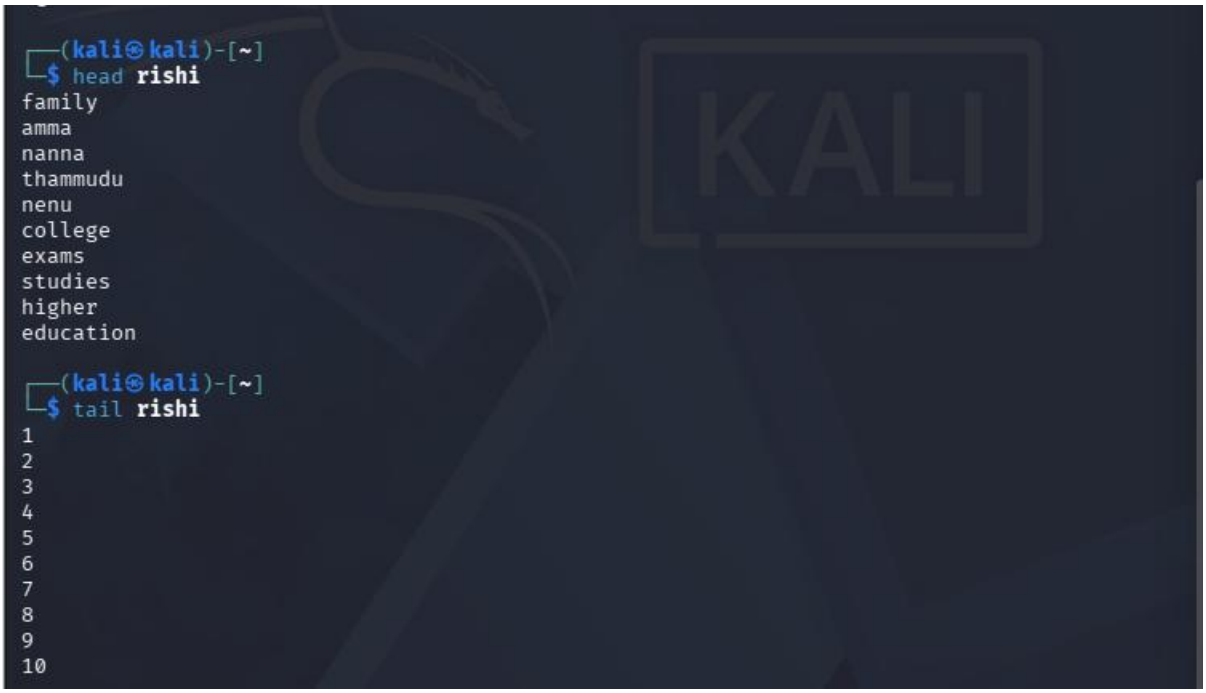

head rishi

tail rishi

Procedure

1. Open the terminal.
2. Execute head rishi to display the first 10 lines.
3. Execute tail rishi to display the last 10 lines.

Sample Output: The screenshot displays the first set of names using head rishi and the numbers 1–10 using tail rishi.

Result: Successfully executed the head and tail commands.
